📍 Chemnitz, Germany

With great interest, I would like to introduce myself as a **passionate and experienced Full Stack Developer**, eager to contribute to your innovative projects with a strong focus on quality, usability, and long-term scalability.

Since January 2022, I have been employed as a **Junior Software Developer at splainX GmbH**, where I have actively contributed to the development of frontend features using **React, TypeScript, Vite, and Vitest**, as well as back-end components with **nginx, Express, Node.js and TypeScript**. My role also involves **code reviews, test-driven development, and technical documentation**, all in close collaboration with product owners and the development team in an **agile environment**.

A significant part of my work involves **blockchain-based projects** (e.g. **Ethereum and Solidity**) and the implementation of **Domain-Driven Design (DDD)**, **Clean Code**, and **SOLID principles**. I am proficient with development tools such as **Git, GitFlow, Git-Lab, and JIRA**.

With the growth of our team, I also took on the **onboarding and mentoring of new team members**, offering structured and hands-on guidance. My ability to explain complex topics clearly and motivate others has been especially appreciated.

I bring a combination of **quick learning, structured problem-solving**, and a **collaborative spirit**, which allows me to consistently meet expectations even under pressure. My efforts have been recognized for their reliability, precision, and initiative.

Currently, I hold a **permanent residence permit in Germany** and am working toward **B1 level German proficiency** (A2 certified). I am fully available and open to both remote and on-site opportunities.

I would be pleased to support your development team with my technical expertise and dedication. Further documents such as my resume and references are available upon request.

Kind Regards,

Akhil Puvvada
